

I agree with the ARRL petition filed under RM-10867 as it would help to create a larger base of amateur radio users who could utilize a greater amount of the allocated amateur radio spectrum.

I believe that allowing easier entry to amateur radio and by allowing more amateurs to use more spectrum, the service could grow and modernize to become a more useful service to the public.

Adoption of this proposal as-is would be beneficial to amateur radio operators and the public in general.

Respectfully submitted,
